

Abstract

**METHODS AND DEVICES FOR ALTERNATIVE DESIGNS
OF INTERIOR SPACE**

5

Systems and methods for changing the visual appearance of an interior space using computer-controlled devices. The computer-controlled devices include a number of video display screens arranged about the interior space to display a series of video images. Several speakers are placed proximate to each video display screen to project ambient sounds associated with the video images being displayed on the video display devices. Several scent generators dispense a scent associated with at least one video image displayed on the video display screens. A central processing unit controls and coordinates the operation of each of the computer-controlled devices to present a multimedia presentation that alters the appearance of the interior space.
